

Do Not Flush Medications!

Can't get to a disposal site?

Here are ways to dispose of medications to ensure our environment stays safe and misuse & accidental overdose are avoided:

- ***Purchase a drug deactivation product online and follow their instructions*** (some brands are Detera, Rx Pill Disposal, Rx Destroyer & Pill Terminator)
These products are typically a bag or bottle with a chemical inside. The medication is placed in the container, you add water, and your medication becomes inactive. You can then simply place it in the trash.
- ***Change the contents so no one would want to use the medication***
Put medication in a sealable container - like a cool whip or sour cream tub. Add enough vinegar to pills/tablets/capsules to dissolve them. Add salt or flour to liquid medications to create a paste-like substance. Tape the container shut with duct tape and put in the trash.
